

How to install FIXGrep on Linux

The guide below describes how to install FIXGrep on Linux servers. It may be also used for the procedure of upgrade to newer version.

Step-by-step guide

1. Download Linux version of FIXGrep from client space or on http://www.b2bits.com/trading_solutions/fix_log_analyzers.html
2. Extract the archive to the required directory. For example:

Unpack the archive

```
tar -xzvf FIXGrep-1.2.12.0-linux-x64.tar.gz -C /FIXEdge/
```

3. Request the license from sales@btobits.com or use the one you already own;
4. Copy the license into the directory where the files are located:

License update example

```
cp /tmp/download/fixgrep.license /FIXEdge/fixgrep-1.2.12.0/
```

5. Run the query.

Query example

```
./fixgrep 35="0" /log/FIXEdge/*.in -o result.log
```
