

# Release notes

## 1.28.2 - May 11, 2020

- Introduced new BovespaApplicationParams::incrementalSequenceTooLowWatermark\_ property - maximum difference allowed between last processed and received incremental sequence number. Default value increased from 10000 to 30000
- Fixed: delayedPacketTimeout\_ property was ignored by handler. Default value increased up to 200ms
- Fixed: TCPReplayer::attemptCounter\_ not reset when counter exceeded limit
- Fixed: TCP Replayer issue - partially filled replay responses caused infinite replay requests to B3 TCP replayer

## 1.27.1 - Aug 26, 2019

- Introduced new TCPReplayParams::noreplyTimeoutSec\_ property. It configures time to wait before sending new TCP Replayer request, in case previous one has not been replied
- Fixed handling of out-dated TCP replayed messages

## 1.26.1 - Feb 06, 2019

- FAST templates updated in the package, B2BITS FIX dictionaries updated up to the latest FAST templates
- Added udpdump utility, which allows to record incoming multicast UDP traffic
- Added support for secondary TCPReplayer feed.
- Added new properties for TCPReplayer configuration: replayExtraAttemptsCount\_, replayExtraAttemptsPause\_
- Added property to enable persistent storage for TCP replayer FIX sessions

## 1.25.5 - Nov 12, 2018

- Added udpreplayer utility, which allows to replay binary files recorded by handler

## 1.25.4 - unofficial release, Oct 1, 2018

- Completely refactored
- Significantly reduced memory usage

## 1.24.0 - initial version, never been released

- ex FA 2.24 version
