

How to increase timeout for connection to Server in FIXICC

By default, FIXICC connection timeout is 30 seconds.

In case if the establishing the connection takes much more time (e.g. with LDAP authentication) it is required to increase the timeout in **fixengine.properties**:

fixengine.properties

```
# Timeout interval in milliseconds. The parameter must be an integer and not negative.  
loginWaitTimeout = 120000
```

More info about FIX-engine parameters in FIXICC can be found here: [FIX Antenna Java Configuration](#)
